MOHAMED SUHAIL KHAN

Intermediate Platform Engineer

Durban, KwaZulu-Natal, South Africa

📱 0671792296 | ✉️ mk3490991@gmail.com | 🔗 LinkedIn | 🐙 GitHub: MohamedSuhailKhan

PROFESSIONAL SUMMARY

Results-driven Platform Engineer with a strong foundation in full-stack development (MERN) and a passion for bridging the gap between code and production. Specializing in cloud infrastructure (AWS/Azure), CI/CD orchestration, and observability. Recognized for maintaining a calm, analytical mindset under pressure and driving team success through automation. Proven track record of eliminating manual toil, migrating legacy systems (TFS to Azure DevOps), and implementing robust monitoring strategies (Dynatrace) to accelerate delivery and ensure system reliability.

CORE TECHNICAL COMPETENCIES

- **Cloud & Infrastructure:** AWS (EC2, S3, Systems Manager), Cloud Resource Management, Infrastructure as Code (IaC)
- **CI/CD & Automation:** Azure DevOps (ADO), GitLab CI, Apache Airflow, Microsoft Power Automate
- **Observability & Security:** Dynatrace, Advanced Logging Strategies, Qualys, DevSecOps Automated Patching
- **Scripting & Development:** Python, PowerShell, MERN Stack (MongoDB, Express.js, React, Node.js), Git/Version Control
- **OS & Administration:** Linux/Unix, Windows Server Administration, Hardware & Network Troubleshooting

PROFESSIONAL EXPERIENCE

Old Mutual South Africa | *Cape Town / Remote*

Intermediate Platform Engineer | *June 2025 – Present*

Architecting scalable internal developer platforms that combine platform engineering with DevOps methodologies to streamline delivery pipelines and ensure enterprise-grade system reliability.

- **Observability & Logging:** Designed and implemented comprehensive logging strategies and custom Dynatrace dashboards for real-time application monitoring, significantly reducing Mean Time To Resolution (MTTR) during incidents.
- **Infrastructure Automation:** Architected and provisioned scalable cloud environments using AWS, providing developers with self-service infrastructure to reduce friction in the software lifecycle.
- **CI/CD Orchestration:** Engineered robust, low-risk deployment pipelines utilizing GitLab CI and Apache Airflow to enable frequent and reliable software releases.

- **DevSecOps Implementation:** Integrated automated patching and vulnerability management using AWS SSM and Qualys to establish and maintain a strict "security-first" posture.
- **Toil Reduction:** Developed custom Python scripts and tools to eliminate manual administrative toil and optimize system performance across Azure and Linux environments.

Old Mutual South Africa | *Cape Town*

Junior Developer | *Feb 2024 – June 2025 Acted as the bridge between Development and Operations, leveraging full-stack architectural knowledge to improve deployment consistency and developer experience.*

- **Legacy System Migration:** Spearheaded the complex organizational migration from legacy TFS (Team Foundation Server) to Azure DevOps (ADO), ensuring zero loss of version history and establishing strict branch policies.
- **Pipeline Development:** Designed and implemented automated build and release pipelines from scratch, reducing manual deployment errors and increasing overall release frequency.
- **Full-Stack Context:** Leveraged deep understanding of application architecture, specifically MERN stack principles, to troubleshoot pipeline failures, API deployments (Swagger), and configuration mismatches.
- **Environment Standardization:** Collaborated with senior engineers to implement Infrastructure as Code (IaC) principles, ensuring parity across Dev, QA, and Production environments.

HUL International | *Global / Remote*

IT Support Technician | *Sep 2023 – Jan 2024*

- **Process Automation:** Leveraged Microsoft Power Automate to design and deploy automated workflows, replacing manual data entry tasks and reducing administrative labor by ~10 hours per week.
- **Global Infrastructure Support:** Maintained a 95% SLA resolution rate providing IT support for three global branches across international time zones.
- **Server Administration:** Managed in-house Windows/Linux servers, achieving 99.9% uptime through proactive patching, resource monitoring, and routine backups.

Your Connection | *Durban*

Technician | *Jan 2020 – Dec 2020*

- **Infrastructure Setup:** Executed full-cycle cabling (Cat5e/6, fiber) and network integration for security systems, reducing average installation time by 20% through standardized pre-configuration.
- **System Integration:** Successfully integrated legacy analog systems with modern IP technology, configuring NVRs for remote monitoring via port forwarding.

TVET College | *Durban*

Data Capturer | *Aug 2019 – Dec 2019*

- **Data Integrity:** Maintained a 99.9% data entry accuracy rate over 5 months managing sensitive exam records under strict POPIA compliance.
- **Process Improvement:** Identified a bottleneck in document sorting and implemented a batching method that increased team processing speed by 15%.

EDUCATION

Advanced Diploma in ICT (Application Development)

Durban University of Technology | *Feb 2023 – Dec 2023*

Diploma in Computer and Information Sciences (General)

Durban University of Technology | *2020 – 2022*
